

Christy Lee

About

Christy Lee is a Computer Science and Informatics double major in the Donald Bren School of Information and Computer Sciences at the University of California, Irvine. Now in her third year, she plans to specialize in Intelligent Systems. Christy is currently employed part-time at the UCI Paul Merage School of Business as an Operation Coordinator Student Assistant.

Beyond academics, Christy has pursued opportunities that build both creativity and leadership. As a competitor in Odyssey of the Mind — an international program that fosters innovation and teamwork — she placed 3rd in the California Division II regionals in 2019 and 1st in Division III in 2020. From 2022 to 2023, she proudly served as a princess in the Miss Temple City Ambassador Program, where she helped organize community events and mentored the next ambassador court. At UCI, she plans to join the UCI Figure Skating Competition Team and continues seeking opportunities to sharpen her technical skills and collaborate with peers on impactful projects.

Projects

September 2023 - June 2024

Humanities Core: Digital Archive & Research

Created as part of UCI’s Humanities Core “Worldbuilding” theme, this project features a digital archive that presents Christy’s interpretations of how people imagine, construct, and reshape their worlds through art, history, and media. The archive also traces the analytical framework and creative reasoning that guided her approach to the accompanying research paper. Her end-of-the-year paper examines the immersive storytelling of Disneyland’s Indiana Jones Adventure, exploring how narrative, design, and sensory experience converge to shape audience perception. Through the lens of worldbuilding, the project reflects on how constructed environments can transcend physical space to evoke emotion, curiosity, and transformation.
